# FACIAL SERVICES

## HYDRA FACIAL

5,000

*A HydraFacial is a non-invasive, multi-step facial treatment that combines the benefits of hydradermabrasion, automated painless extractions, and a special delivery of Vitamin C, hyaluronic acid, and salicylic acid. The HydraFacial machine uses a patented technology to cleanse, exfoliate, extract, and hydrate the skin, providing immediate and noticeable results without any downtime or irritation.*

### **Benefits:**

- **Deep Cleansing:** Effectively removes impurities and dead skin cells.
- **Exfoliation:** Promotes the shedding of dead skin cells to reveal a smoother, more radiant complexion.
- **Hydration:** Delivers intense hydration to the skin, making it look plump and healthy.
- **Customizable:** Can be tailored to address specific skin concerns such as fine lines, wrinkles, hyperpigmentation, and acne.
- **Immediate Results:** Provides visible improvements in skin texture and appearance right after the treatment.
- **No Downtime:** Non-invasive with no recovery period required, making it suitable for all skin types and busy schedules.

### **Ideal for:**

- Dull or uneven skin tone
- Acne-prone skin
- Aging and fine lines
- Dehydrated skin
- Uneven texture and large pores
- Pre-event glow
- Sensitive skin

## ADVANCED ACNE THERAPY

4,500

*Advanced Acne Therapy offers a synergistic approach to addressing acne. This treatment leverages the exfoliating and anti-inflammatory properties of acids with the deep rejuvenating effects of laser treatments. The result is a comprehensive treatment that targets acne, reduces inflammation, improves skin texture, and minimizes scarring.*

### **Benefits:**

- **Enhanced Exfoliation:** Acid peels remove dead skin cells and clear clogged pores, creating a smooth surface for laser treatments.
- **Improved Skin Texture:** Laser treatments address deeper skin issues, including texture and scarring, providing comprehensive skin rejuvenation.
- **Reduced Acne and Scarring:** The combination of acids and lasers targets both active acne and residual scarring, leading to clearer, more even skin.
- **Synergistic Effects:** The dual approach enhances overall treatment efficacy, providing both immediate and long-term improvements.
- **Minimized Downtime:** Combining these treatments often results in minimal downtime compared to more invasive procedures.

### **Ideal for:**

- Individuals with moderate to severe acne who also have residual scarring or pigmentation issues.
- Those seeking a comprehensive solution that addresses both active acne and its long-term effects.
- Clients who have not responded well to traditional acne treatments and are looking for advanced solutions.

## EMPRESS FACIAL

10,000

*Empress Facial is a cutting-edge treatment that combines two advanced skincare technologies to deliver an all-encompassing facial experience. This fusion treatment integrates the deep cleansing and hydrating benefits, resulting in a rejuvenated, radiant complexion with improved texture and clarity.*

### **Benefits:**

- Comprehensive Care: Combines the deep cleansing, hydration, and exfoliation. Enhanced Radiance:
- Provides a refreshed, glowing complexion by improving skin texture and clarity. Deep Hydration: Delivers
- intensive moisture and nourishment to combat dryness and enhance skin vitality. Improved Texture:
- Smooths and revitalizes the skin, addressing issues like dullness, uneven texture, and signs of aging.
- Non-Invasive: Offers effective results with minimal downtime, making it suitable for all skin types.

### **Ideal for:**

- Individuals seeking a comprehensive facial treatment that addresses multiple skin concerns. Clients
- looking for enhanced hydration, improved skin texture, and a radiant complexion. Those who
- want the combined benefits of advanced cleansing, exfoliation, and nutrient infusion.

# LASER TREATMENTS

## ULTRAFORMER MPT

80,000

*The Ultraformer MPT is a cutting-edge device used in non-invasive aesthetic treatments, particularly for skin tightening, lifting, and body contouring. It employs advanced micro-focused ultrasound (MFU) technology to target deeper layers of the skin and underlying tissues without the need for surgery.*

### How UltraformerMPT Works:

#### 1. Micro-Focused Ultrasound Technology:

- Ultraformer MPT uses MFU technology to deliver high-intensity focused ultrasound (HIFU) energy to specific depths beneath the skin. This energy is precisely targeted to reach the dermal layer and the superficial muscular aponeurotic system (SMAS), the same layer treated during surgical facelifts.
- The ultrasound energy creates thermal coagulation points at these targeted depths, causing controlled micro-damage to the tissues. This triggers the body's natural healing response, leading to collagen production and tissue regeneration.

#### 2. Skin Tightening and Lifting:

- As new collagen forms, the skin gradually tightens and lifts, reducing sagging and improving the overall firmness and elasticity of the treated areas.
- Ultraformer MPT is particularly effective for lifting and tightening the skin on the face, neck, and décolletage, as well as contouring areas of the body.

#### 3. Body Contouring:

- In addition to facial treatments, Ultraformer MPT can also be used for body contouring. The ultrasound energy can penetrate deeper layers of fat, causing the fat cells to break down and be naturally eliminated by the body over time.

#### 4. Customization with MPT (Micro-Pulse Technology):

- The “MPT” in UltraformerMPT refers to Micro-Pulse Technology, which allows for precise control over the energy delivery. This enables the device to be tailored to different skin types and treatment areas, offering customized treatment plans for each patient.
- MPT enhances patient comfort and treatment efficacy by allowing practitioners to adjust the intensity and depth of the ultrasound pulses.

### Benefits of UltraformerMPT:

- **Non-Invasive:** No incisions, needles, or anesthesia are required, making it a safer alternative to surgical procedures.
- **Minimal Downtime:** Patients can typically return to their normal activities immediately after the procedure, with minimal or no downtime.
- **Long-Lasting Results:** The effects of UltraformerMPT treatments can last for several months to a year, depending on the individual's skin condition and lifestyle.

- **Versatility:** UltraformerMPT can be used on various areas of the face and body, making it suitable for multiple aesthetic concerns, including skin laxity, fine lines, wrinkles, and body contouring.
- **Customizable Treatments:** The device's ability to adjust the depth and intensity of treatment allows for highly personalized treatment plans, addressing specific patient needs.

#### **Common Treatment Areas:**

- **Face:** Lifting and tightening of the forehead, brow, cheeks, jawline, and neck.
- **Neck and Décolletage:** Reducing sagging and improving skin texture.
- **Body:** Contouring and tightening of areas like the abdomen, thighs, buttocks, and arms.

#### **What to Expect During Treatment:**

- **Procedure Time:** Treatment sessions typically last between 30 minutes to an hour, depending on the area being treated.
- **Sensation:** Patients may feel some warmth or tingling during the procedure as the ultrasound energy is delivered. Discomfort is generally minimal, and many patients find the treatment tolerable without the need for pain relief.
- **Post-Treatment Effects:** Mild redness or swelling may occur immediately after the treatment but usually subsides within a few hours.

#### **Who Is It For?**

UltraformerMPT is suitable for individuals who are looking for non-surgical solutions to address signs of aging, such as sagging skin and wrinkles, or those seeking to contour specific areas of the body. It is an excellent option for those who want noticeable results without the risks and recovery time associated with surgery.

#### **Results:**

- **Gradual Improvement:** Results develop gradually over 2 to 3 months as new collagen forms and the skin tightens.
- **Long-Lasting:** With proper skincare and maintenance, the effects of the treatment can last for several months to a year or longer.

Overall, UltraformerMPT offers a powerful, non-invasive option for achieving a more youthful, lifted appearance and improved body contours with minimal discomfort and downtime.

## CO2 FRACTIONAL LASER

12,000

*CO2 fractional laser is a skin treatment technology that uses a carbon dioxide (CO2) laser to target deep layers of the skin. It works by delivering tiny beams of light in a fractionated pattern, creating microscopic wounds while leaving surrounding skin untouched. This stimulates the body's natural healing process, promoting collagen production and skin renewal.*

### **It's commonly used for:**

- Reducing wrinkles and fine lines
- Treating scars (including acne scars)
- Improving skin texture and tone
- Treating sun damage and pigmentation
- Tightening skin

### **Benefits and Uses:**

- Wrinkle and Fine Line Reduction
- Scar Treatment
- Skin Tone and Texture Improvement
- Skin Tightening
- Pore Minimization

### **Risks and Side Effects:**

- Redness and Swelling: These are the most common side effects, usually lasting for a few days to a week.
- Scarring or Pigmentation Changes: Rare, but more likely if the skin is not properly cared for during recovery or if the patient has darker skin.
- Infection: Though rare, there's a small risk of infection if the treated area is not kept clean.

### **Ideal Candidates:**

- People with moderate to severe skin imperfections (deep wrinkles, scars, sun damage). Those
- looking for more dramatic results and who are willing to tolerate a longer recovery period.

### **However, CO2 fractional lasers may not be ideal for:**

- People with very dark skin (due to higher risk of hyperpigmentation).
- Individuals with active infections or open wounds in the treatment area.

### **Results:**

Most patients notice improvements after a single session, but multiple treatments may be recommended for optimal results. Collagen production continues for several months after the treatment, leading to long-term skin improvement.

## DERMAPEN (MICRONEEDLING) with ASCE EXOSOMES

25,000

*Derma Pen with ASCE exosomes is an advanced skin treatment that combines microneedling with the application of exosomes derived from stem cells (such as ASCE exosomes) to enhance skin repair and rejuvenation.*

### Components of the Treatment:

#### 1. Derma Pen (Microneedling):

Microneedling is a minimally invasive procedure where tiny, sterile needles are used to create microinjuries in the skin. These micro-injuries stimulate the skin's natural healing process, encouraging collagen and elastin production.

Derma Pen is a pen-like device used to perform microneedling. It allows for controlled depth and precision, making it effective for treating a variety of skin concerns such as wrinkles, scars, and pigmentation issues.

#### 2. ASCE Exosomes:

Exosomes are tiny, extracellular vesicles that are naturally secreted by stem cells. They carry important growth factors, proteins, and genetic material that can stimulate skin regeneration and repair.

ASCE Exosomes are derived from human stem cells and are designed for anti-aging and skin regeneration purposes. They help improve skin texture, tone, and overall vitality by boosting collagen production, reducing inflammation, and accelerating skin healing.

### Benefits of Derma Pen with ASCE Exosomes:

- Enhanced Skin Rejuvenation
- Scar Reduction
- Improved Skin Texture and Tone
- Anti-Aging Effects
- Minimizes Pore Size

### Downtime and Results:

- Downtime: There may be mild redness and swelling immediately after the treatment, similar to a mild sunburn, but this typically subsides within a few days.
- Results: Patients often see noticeable improvements in skin texture, tone, and overall radiance within a few weeks. Multiple sessions may be needed for optimal results, depending on the specific skin concerns being treated.

### Ideal Candidates:

- Those seeking to improve skin texture, reduce scars, or treat signs of aging such as wrinkles and fine lines.
- Individuals looking for a non-invasive, advanced skincare solution with minimal downtime.

This combination of microneedling with ASCE exosomes is considered an advanced, cutting-edge treatment for skin rejuvenation, with benefits that surpass traditional microneedling alone.

## INFINI RF MICRONEEDLING with ASCE EXOSOMES

35,000

*Infini RF Microneedling is a cutting-edge skin treatment that combines the benefits of microneedling with radiofrequency (RF) energy to target deeper layers of the skin for comprehensive rejuvenation. This minimally invasive procedure uses fine needles to create tiny microchannels in the skin, triggering the body's natural healing response. At the same time, RF energy is delivered into the deeper layers of the skin, stimulating collagen production and promoting skin tightening.*

*This dual-action approach makes Infini RF a powerful solution for treating a variety of skin concerns, including wrinkles, fine lines, acne scars, sagging skin, and uneven texture. Unlike traditional microneedling, Infini RF allows for customizable depth and intensity, ensuring optimal results for different skin types and areas of concern.*

### **Key Benefits of Infini RF Microneedling:**

- **Skin Tightening:** The RF energy heats the deeper skin layers, stimulating collagen production and resulting in firmer, more youthful-looking skin.
- **Wrinkle Reduction:** The combined effect of microneedling and RF reduces the appearance of fine lines and wrinkles, smoothing the skin's surface.
- **Scar Reduction:** Effective for reducing the appearance of acne scars, surgical scars, and stretch marks by promoting skin regeneration.
- **Improves Skin Texture:** Helps minimize pores, reduce roughness, and give the skin a smoother, more refined appearance.
- **Minimal Downtime:** Infini RF offers powerful results with minimal recovery time, making it ideal for those looking for effective treatments without long interruptions to their daily routine.
- **Customizable for Different Skin Types:** Adjustable needle depth and RF intensity ensure the treatment can be tailored to each individual's specific skin needs.
- **Long-lasting Results:** As collagen production continues over several months, patients experience gradual and long-lasting improvements in skin tone, texture, and firmness.

# INFUSIONS

## IMMUNE BOOST IV THERAPY 6,000

*Immune Boost Therapy is a treatment designed to strengthen the body's immune system by delivering a blend of vitamins, minerals, antioxidants, and amino acids directly into the bloodstream through an IV drip or supplements. It helps the body fight off infections, reduce inflammation, and enhance overall health and resilience.*

### **Benefits of Immune Boost Therapy:**

- Strengthens the immune system and fights off infections
- Reduces the duration and severity of colds & flu
- Increases energy levels and combats fatigue
- Reduces inflammation and oxidative stress
- Supports overall wellness and recovery

## FERTILITY SUPPORT IV THERAPY 12,000

*Fertility Support IV Therapy is an intravenous treatment designed to enhance reproductive health by delivering essential vitamins, minerals, antioxidants, and amino acids directly into the bloodstream. This therapy helps support hormonal balance, improve egg and sperm quality, and optimize overall fertility for both men and women.*

### **Benefits of Fertility IV Therapy:**

- Supports egg and sperm health by reducing oxidative stress
- Promotes hormonal balance for improved reproductive function
- Enhances blood flow to reproductive organs for better implantation
- Reduces stress and inflammation, which can impact fertility
- Provides essential nutrients for a healthy pregnancy preparation

## RECOVERY IV THERAPY

### 6,000

*Recovery IV Therapy is an intravenous treatment designed to help the body recover from fatigue, dehydration, stress, illness, intense workouts, or hangovers by replenishing essential fluids, electrolytes, vitamins, and antioxidants. This therapy helps restore energy levels, detoxify the body, and accelerate recovery.*

#### **Benefits of Recovery IV Therapy:**

- Rehydrates the body quickly and efficiently
- Restores energy levels and combats fatigue
- Detoxifies the liver and supports metabolic recovery
- Relieves muscle soreness and inflammation
- Boosts the immune system and accelerates healing
- Helps with hangover recovery and mental clarity

## VITALITY DRIP 10,000

*Vitality IV Therapy is an intravenous treatment designed to boost energy, enhance immunity, and support overall wellness by delivering a potent blend of vitamins, minerals, and antioxidants directly into the bloodstream. This therapy is ideal for individuals seeking increased vitality, improved mental clarity, and long-term health benefits.*

### **Benefits of Vitality IV Therapy:**

- Increases energy levels and reduces fatigue
- Boosts immune function to fight illness and infections
- Supports mental clarity and mood balance
- Reduces inflammation and oxidative stress
- Promotes muscle recovery and relaxation
- Enhances hydration and overall well-being

### **Who Can Benefit from Vitality IV Therapy?**

- People experiencing chronic fatigue or low energy
- Those needing an immune boost (especially during flu season)
- Individuals with high stress levels or burnout
- Those recovering from illness, travel fatigue, or jet lag
- Anyone looking to enhance longevity and overall wellness

## **RADIANCE DRIP**

### **8,000**

*The Radiance Drip is an intravenous therapy designed to enhance skin health and promote a natural glow by delivering a blend of vitamins, antioxidants, and minerals directly into the bloodstream. This treatment is formulated to hydrate, detoxify, and nourish the skin from within, supporting a more vibrant and youthful complexion. It's often used to target skin aging, dullness, and dehydration, helping clients achieve a refreshed, radiant appearance.*

#### **Benefits of Radiance Drip:**

- Hydrates the skin, improving texture and reducing dryness
- Brightens and evens skin tone, reducing pigmentation and dullness
- Promotes collagen production, enhancing skin elasticity and firmness
- Detoxifies the body
- Boosts hair and nail health, resulting in a more youthful, glowing appearance
- Reduces inflammation and supports overall skin health

## NAD+ THERAPY

### 22,000

*NAD+ IV Therapy is an intravenous treatment that delivers Nicotinamide Adenine Dinucleotide (NAD+), a coenzyme present in every cell of the body, directly into the bloodstream. NAD+ plays a vital role in cellular metabolism, energy production, and DNA repair. As we age, the levels of NAD+ in our bodies naturally decline, which can contribute to fatigue, aging, cognitive decline, and metabolic dysfunction. NAD+ IV therapy helps replenish these levels, leading to various health benefits.*

#### **Key Benefits of NAD+ IV Therapy:**

- **Increases Energy Levels** –NAD+ is crucial for mitochondrial function, helping to generate energy at the cellular level, which can lead to reduced fatigue and better overall vitality.
- **Supports Brain Health** –NAD+ helps protect and repair DNA, improves cognitive function, and has been shown to help with conditions like brain fog and memory loss.
- **Improves Mental Clarity and Focus** –By supporting brain function, NAD+ helps improve concentration, memory, and mental sharpness.
- **Enhances**

# MEDICAL SERVICES

## **BOTULINUM TOXIN (TYPE A)**

500/unit

*Botox is a non-surgical, FDA-approved treatment that temporarily reduces the appearance of fine lines and wrinkles by relaxing facial muscles. It is most commonly used to treat areas such as:*

- Forehead lines
- Frown lines (between the eyebrows)
- Crow's feet (around the eyes)
- Bunny lines (on the sides of the nose)
- Neck bands

### **How It Works:**

Botox blocks nerve signals to specific muscles, preventing them from contracting. As a result, the skin in the treated area smoothens, reducing the appearance of wrinkles. The treatment is quick, with minimal downtime, and typically takes 10-15 minutes.

### **What to Expect:**

Results usually begin to appear within 3 to 5 days, with full effects visible within 7 to 10 days. The effects last between 3 to 6 months, depending on the area treated and individual factors.

### **Ideal For:**

- Clients looking to reduce the appearance of dynamic wrinkles caused by muscle movement.
- Those seeking a refreshed, youthful look without surgery.

### **Procedure Time:** 10–15 minutes

- Downtime: Minimal to none (some clients may experience mild bruising or swelling).
- Results: Visible within days, lasting up to 3–6 months.

## **FILLERS (RESTYLANE)**

30,000

*Restylane is a range of FDA-approved hyaluronic acid (HA) dermal fillers designed to smooth wrinkles, enhance facial contours, and restore volume. Hyaluronic acid is a naturally occurring substance in the skin that helps maintain hydration and elasticity. Restylane fillers are ideal for clients looking to achieve a youthful, refreshed appearance without surgery.*

### **What Restylane Can Treat:**

- Nasolabial folds (laugh lines)
- Marionette lines (lines around the mouth)
- Lip enhancement (for fuller, more defined lips)
- Cheek augmentation (to restore lost volume)
- Under-eye hollows (for a more awake and youthful look)
- Chin and jawline contouring

### **How It Works:**

Restylane is injected beneath the skin to add volume and smooth out fine lines and wrinkles. The hyaluronic acid in Restylane binds with water in the skin to restore lost volume and create a more youthful contour. The results are immediate, with a natural-looking enhancement that lasts 6 to 18 months, depending on the area treated and the specific Restylane product used.

### **Types of Restylane Fillers:**

- Restylane –Ideal for moderate to severe facial wrinkles and folds.
- Restylane Lyft –Adds lift and volume to cheeks and midface.
- Restylane Silk –Specially formulated for subtle lip enhancement and smoothing fine lines around the lips.
- Restylane Refyneand Defyne–Designed for natural expression while treating deeper wrinkles and folds.

### **What to Expect:**

- Treatment Time: 30–45 minutes
- Downtime: Minimal, though some clients may experience mild swelling, bruising, or redness at the injection site, which typically resolves within a few days.
- Results: Immediate, with continued improvement as swelling subsides. Results last between 6 and 18 months.

### **Ideal For:**

- Clients looking to smooth deep wrinkles and folds. Those wanting to restore lost
- volume or enhance facial features like lips and cheeks.

## LUSCIOUS LIPS

25,000

*Restylane is an FDA-approved hyaluronic acid (HA) dermal filler, perfect for enhancing the lips by adding volume, definition, and smoothness. Hyaluronic acid is a natural substance in the skin that helps maintain hydration and elasticity, making Restylane an ideal choice for clients looking for fuller, more defined lips with a natural appearance.*

### **What Restylane Lip Fillers Can Do:**

- Add volume to thin or naturally small lips
- Enhance the shape and contour of the lips
- Smooth out fine lines around the mouth (smoker's lines)
- Provide hydration for a plumper, softer lip texture
- Create a balanced, symmetrical lip shape

### **How It Works:**

- Restylane Lip Fillers are specifically formulated to enhance lip volume and definition, using hyaluronic acid to attract water and create a soft, plump effect. The treatment is customizable, allowing for subtle, natural enhancements or more dramatic results, depending on the client's goals.

### **What to Expect:**

- Treatment Time: 30 minutes
- Downtime: Minimal; some clients may experience temporary swelling, bruising, or tenderness, which typically subsides within a few days.
- Results: Immediate results with lips appearing fuller and more defined. Final results are visible once any swelling has resolved, and results typically last 6–12 months, depending on the individual and the product used.

### **Ideal For:**

- Clients looking to achieve fuller, more youthful lips.
- Those wanting to smooth fine lines around the mouth.
- Clients seeking subtle or dramatic lip enhancement.

Note: Lip fillers are performed by a licensed professional, ensuring that the shape and volume complement your natural facial features for beautiful, balanced results.

## RESTYLANE SKIN BOOSTER

25,000

*Restylane Skin Booster is a type of injectable treatment designed to improve the overall quality and hydration of the skin. Unlike traditional dermal fillers that are used to add volume or reshape facial features, skin boosters like Restylane focus on deeply hydrating the skin from within. They contain stabilized hyaluronic acid, which attracts water to the skin, improving elasticity, firmness, and texture.*

*The treatment is often used to target areas like the face, neck, décolletage, and hands, providing a natural glow and a more youthful appearance. It's popular for improving fine lines, dullness, and rough skin, making the skin appear smoother and more radiant. Restylane Skin Booster treatments usually require a series of sessions for optimal results, with effects lasting several months.*

## PROFHILO

35,000

*Profilo is an innovative injectable treatment designed to improve skin hydration, elasticity, and overall quality. It is different from traditional fillers because it doesn't aim to add volume but instead stimulates the production of collagen and elastin, which naturally improve the skin's texture and firmness.*

*Profilo contains one of the highest concentrations of hyaluronic acid on the market. Once injected, it spreads evenly beneath the skin, hydrating the tissue and remodeling the skin over time. This makes it particularly effective for treating skin laxity, giving the skin a firmer, smoother, and more youthful appearance. It is often used on the face, neck, décolletage, hands, and other areas prone to aging.*

*Typically, Profilo treatments are done in three sessions spaced about a month apart, with effects lasting several months. It's considered a good option for those looking for a natural skin rejuvenation treatment without adding volume or definition like traditional dermal fillers.*

## SCULPTRA

60,000

*Sculptra is an injectable treatment designed to stimulate the skin's natural collagen production, helping to restore facial volume and reduce the appearance of wrinkles and fine lines over time. Unlike traditional dermal fillers, which provide immediate results by adding volume, Sculptra works gradually by encouraging the body to rebuild its own collagen, resulting in a more natural, long-lasting rejuvenation.*

*The key ingredient in Sculptra is poly-L-lactic acid (PLLA), a biocompatible, biodegradable substance that has been used in medical applications for many years. Once injected into the skin, it helps to stimulate collagen growth, which gradually fills in the areas of volume loss and improves skin texture and firmness.*

*Sculptra is often used to treat areas such as the cheeks, temples, and jawline, and can also improve deep nasolabial folds (smile lines) and marionette lines. The treatment typically requires a series of sessions spaced over several months, and the results develop gradually, lasting up to two years or more with proper maintenance.*

## NCTF

15,000 –25,000

*NCTF (New Cellular Treatment Factor) is primarily used in mesotherapy to rejuvenate and improve skin quality. Here are its main uses and benefits:*

### Uses:

- **Skin Rejuvenation:** NCTF is commonly used to restore youthful appearance by improving skin texture, tone, and elasticity.
- **Anti-Aging:** It helps reduce fine lines, wrinkles, and other visible signs of aging by promoting collagen and elastin production.
- **Hydration:** The hyaluronic acid in NCTF deeply hydrates the skin, making it plumper and smoother.
- **Revitalization of Dull Skin:** It is ideal for treating tired or lackluster skin, giving it a more radiant and glowing look.
- **Correcting Skin Damage:** It can help repair damage from environmental factors like sun exposure and pollution.
- **Post-Procedure Recovery:** Used after aesthetic treatments like lasers or microneedling to speed up recovery and enhance results.

### Benefits:

- **Enhanced Skin Hydration:** Hyaluronic acid deeply hydrates the skin, reducing dryness and improving skin softness and smoothness.
- **Improved Skin Elasticity:** The combination of amino acids, vitamins, and coenzymes boosts collagen production, increasing skin firmness and reducing sagging.
- **Reduced Wrinkles and Fine Lines:** NCTF stimulates the skin's natural regeneration process, helping to fill in wrinkles and fine lines for a more youthful appearance.
- **Brightened Complexion:** Antioxidants and vitamins in the solution help brighten and even out the skin tone, making the complexion appear fresher and more radiant.
- **Long-Lasting Effects:** Regular treatments with NCTF provide cumulative benefits, improving the skin's overall health and appearance over time.
- **Safe for All Skin Types:** The formula is gentle and biocompatible, making it suitable for most skin types, even sensitive skin.

NCTF is an all-in-one treatment for those looking to maintain youthful, healthy, and hydrated skin, with noticeable improvement in texture, tone, and elasticity.

## REJURAN H

25,000 (1 syringe)

40,000 (2 syringes)

RejuranH is a specialized skin treatment product designed to provide deep hydration and promote skin healing. It is part of the Rejuranrange, which utilizes polynucleotides (PN), a component derived from salmon DNA, to improve skin health. The “H” in RejuranH stands for “hydration,” meaning it is specifically formulated to offer intense moisturizing benefits while encouraging skin regeneration.

### Uses:

- **Skin Hydration:** RejuranH provides deep and long-lasting hydration, improving skin moisture balance and plumpness.
- **Skin Healing and Regeneration:** The polynucleotides (PN) in RejuranH help to repair damaged skin by stimulating cellular regeneration, making it effective for treating sensitive or compromised skin.
- **Anti-Aging:** By promoting collagen synthesis, it helps improve skin elasticity, reducing the appearance of fine lines and wrinkles.
- **Post-Procedural Care:** RejuranH is often used after treatments like lasers, chemical peels, or microneedling to enhance healing and reduce downtime.
- **Improve Skin Texture:** It smooths rough or uneven skin texture, resulting in softer, more refined skin.
- **Scar Treatment:** Can be used to reduce the appearance of scars, including acne scars, by improving skin healing and tissue repair.

### Benefits:

- **Deep and Long-Lasting Hydration:** RejuranH hydrates the skin from within, making it ideal for dry or dehydrated skin and promoting a plumper, youthful appearance.
- **Enhanced Skin Repair:** Its polynucleotide content accelerates the skin’s natural healing process, helping to repair damage from aging, environmental stress, or procedures.
- **Improved Elasticity:** It boosts collagen production, increasing skin firmness and elasticity, which leads to a reduction in sagging and fine lines.
- **Smoother Skin Texture:** Regular treatments improve overall skin texture, reducing roughness and making the skin feel smoother and softer.
- **Reduced Inflammation:** Polynucleotides have anti-inflammatory properties that calm irritated or sensitive skin, making RejuranH suitable for those with inflamed or compromised skin barriers.
- **Natural-Looking Results:** RejuranH provides a natural enhancement to the skin, with subtle but noticeable improvements in hydration, texture, and tone.

In summary, RejuranH is primarily used to hydrate, heal, and rejuvenate the skin, making it particularly useful for dry, aging, or damaged skin types, with the added benefit of promoting collagen production and natural skin regeneration.

## REJURAN I

18,000

*RejuranI is a specialized variant of the Rejuran product line, designed specifically for treating the delicate skin around the eyes. Like other Rejuran products, RejuranI contains polynucleotides (PN) derived from salmon DNA, which are known for their skin regeneration and healing properties. The “I” in RejuranI stands for “intensive”, referring to its focused use for the sensitive under-eye area.*

### Uses:

- **Under-Eye Rejuvenation:** RejuranI is primarily used to treat the delicate under-eye skin, reducing dark circles and puffiness.
- **Fine Lines and Wrinkles:** It targets fine lines and wrinkles around the eyes, such as crow’s feet, by promoting collagen synthesis.
- **Improvement of Skin Elasticity:** It helps tighten the skin around the eyes, preventing sagging and improving firmness.
- **Skin Hydration:** RejuranI deeply hydrates the thin under-eye skin, improving its overall texture and smoothness.
- **Prevention of Aging Signs:** It serves as a preventive treatment for early signs of aging in the eye area, ideal for those looking to maintain youthful skin.
- **Sensitive Skin Treatment:** Suitable for use on thin and sensitive skin around the eyes without causing irritation.

### Benefits:

- **Reduction of Dark Circles:** RejuranI helps to improve blood circulation and skin quality, reducing the appearance of dark circles and giving a refreshed look.
- **Smoother Fine Lines:** By stimulating collagen production, it softens fine lines and wrinkles, particularly crow’s feet, making the under-eye area appear more youthful.
- **Enhanced Skin Firmness:** It improves the elasticity of the skin around the eyes, reducing sagging and promoting a firmer, lifted appearance.
- **Intensive Hydration:** RejuranI provides long-lasting moisture, improving the skin’s hydration levels and reducing dryness or roughness in the eye area.
- **Quick Recovery and Healing:** The polynucleotides enhance the skin’s natural healing process, reducing signs of fatigue and accelerating skin repair.
- **Natural and Gentle Treatment:** It offers natural-looking improvements with minimal side effects, making it suitable for sensitive or delicate areas like the under-eye region.

RejuranI is an intensive rejuvenation treatment specifically designed to treat and improve the skin around the eyes. It effectively reduces fine lines, dark circles, and puffiness, while also enhancing hydration, elasticity, and overall skin texture in this delicate area. Its anti-aging and skin-healing benefits make it a popular choice for those looking to improve or maintain youthful, refreshed eyes.

## SCHLERTHERAPY

5,000 –10,000

*Sclerotherapy is a medical procedure used to treat varicose veins and spider veins. It involves the injection of a solution, usually a salt-based or detergent-based sclerosant, directly into the affected veins. The solution irritates the lining of the blood vessel, causing it to collapse and stick together. Over time, the vein is reabsorbed by the body and fades from view.*

### Uses:

- **Treatment of Varicose Veins:** Sclerotherapy is commonly used to close off larger varicose veins, which are swollen, twisted veins that can cause discomfort and affect appearance.
- **Treatment of Spider Veins:** It is also effective for smaller, visible veins just under the surface of the skin known as spider veins.
- **Relief from Symptoms:** In addition to cosmetic benefits, sclerotherapy can help alleviate symptoms associated with varicose veins, such as pain, swelling, and cramping.

### Benefits:

- **Improves Appearance:** Sclerotherapy effectively reduces the visibility of varicose and spider veins, improving the cosmetic appearance of the legs or other affected areas.
- **Minimally Invasive:** The procedure is non-surgical and involves only injections, making it minimally invasive with little downtime.
- **Reduces Symptoms:** It can relieve the discomfort associated with varicose veins, such as aching, swelling, and burning sensations.
- **Quick Recovery:** Most people can resume normal activities shortly after the procedure, with minimal side effects.
- **Long-Lasting Results:** Once treated, the veins typically fade within a few weeks or months, and the results are long-lasting for most patients.

## KELOID INJECTION

2,500 –5,000

*Sclerotherapy is a medical procedure used to treat varicose veins and spider veins. It involves the injection of a solution, usually a salt-based or detergent-based sclerosant, directly into the affected veins. The solution irritates the lining of the blood vessel, causing it to collapse and stick together. Over time, the vein is reabsorbed by the body and fades from view.*

### Uses:

- **Treatment of Varicose Veins:** Sclerotherapy is commonly used to close off larger varicose veins, which are swollen, twisted veins that can cause discomfort and affect appearance.
- **Treatment of Spider Veins:** It is also effective for smaller, visible veins just under the surface of the skin known as spider veins.
- **Relief from Symptoms:** In addition to cosmetic benefits, sclerotherapy can help alleviate symptoms associated with varicose veins, such as pain, swelling, and cramping.

### Benefits:

- **Improves Appearance:** Sclerotherapy effectively reduces the visibility of varicose and spider veins, improving the cosmetic appearance of the legs or other affected areas.
- **Minimally Invasive:** The procedure is non-surgical and involves only injections, making it minimally invasive with little downtime.
- **Reduces Symptoms:** It can relieve the discomfort associated with varicose veins, such as aching, swelling, and burning sensations.
- **Quick Recovery:** Most people can resume normal activities shortly after the procedure, with minimal side effects.
- **Long-Lasting Results:** Once treated, the veins typically fade within a few weeks or months, and the results are long-lasting for most patients.

## HIKO NON-SURGICAL NOSE LIFT

35,000

*HIKO (short for “High nose” in Korean) is a non-surgical nose lift procedure, also known as a PDO thread lift for the nose. It is a popular cosmetic treatment that uses Polydioxanone (PDO) threads to enhance the shape and contour of the nose without the need for invasive surgery. This procedure is commonly referred to as the “lunch-time nose job” because it is quick, minimally invasive, and requires little to no downtime.*

### **How HIKO Works:**

**PDO Threads:** Thin, dissolvable threads made from polydioxanone (a safe suture material) are inserted into the nose using a fine needle or cannula. These threads act as a scaffold, providing structure and lift to the nose.

**Collagen Stimulation:** The insertion of PDO threads triggers the body’s natural collagen production over time, which helps further refine the nose’s appearance and supports the lift created by the threads.

**Immediate Results:** The results are visible right after the procedure, with continued improvement as collagen builds around the threads.

### **Uses:**

**Nose Bridge Enhancement:** HIKO can elevate the nose bridge to create a more defined and higher profile without the need for surgical implants.

**Tip Projection:** The threads can lift the nasal tip, providing a more pronounced and aesthetically pleasing nose shape.

**Nose Contouring:** It is used to refine and contour the nose’s shape, especially for patients who desire subtle changes without undergoing rhinoplasty.

**Nasal Support:** PDO threads strengthen and support the nasal structure, particularly in individuals with a flat or drooping nose.

### **Benefits:**

**Non-Surgical:** The HIKO nose lift is non-invasive, with no cutting, stitches, or long recovery time required.

**Immediate Results:** Patients can see an immediate improvement in the shape and height of their nose after the procedure.

**Minimal Downtime:** It is often called a “lunchtime procedure” because of its short duration and quick recovery. Most people can return to daily activities within a day or two.

**Temporary and Adjustable:** Since the threads dissolve over time (typically 6-12 months), the results are not permanent, making it suitable for those who want temporary enhancements or wish to adjust their appearance.

**Stimulates Collagen:** The threads not only provide a lift but also promote collagen production, enhancing the overall skin texture and firmness in the treated area.

**Safe and Low-Risk:** The use of PDO threads has a low risk of complications compared to traditional rhinoplasty, with most side effects limited to minor swelling or bruising.

The HIKO non-surgical nose lift is a quick, minimally invasive procedure that uses PDO threads to reshape and lift the nose, enhancing the bridge and tip for a more defined appearance. It offers immediate results, minimal recovery time, and the added benefit of collagen production, making it a popular choice for those looking to improve their nose's appearance without surgery.

## V-LIFT (THREADLIFT)

*A V-lift using threads, also known as a thread lift, is a non-surgical cosmetic procedure that lifts and tightens sagging skin, particularly in the lower face, neck, and jawline, to create a more defined “V-shape” appearance. This procedure uses special threads, often made of Polydioxanone (PDO), Polylactic Acid (PLA), or Polycaprolactone (PCL), which are inserted under the skin to lift and reposition tissue while also stimulating collagen production.*

### How the V-Lift Works:

- **Thread Insertion:** Dissolvable threads with small barbs or cones are inserted into the skin using a fine needle or cannula. These threads hook onto the skin tissues to provide an immediate lifting effect.
- **Immediate Lift:** The threads mechanically lift sagging skin and contour areas like the cheeks, jawline, and neck.
- **Collagen Stimulation:** As the threads dissolve over several months (typically 6-12 months), they stimulate the body’s natural collagen production, which helps to maintain firmness and improve skin texture over time.

### Areas Treated:

- **Jawline:** Lifts and tightens loose skin along the jawline, helping to create a more defined “V” shape to the face.
- **Cheeks:** Repositions sagging cheeks to create a more youthful, lifted appearance.
- **Neck:** Reduces sagging skin and softens wrinkles in the neck area.
- **Nasolabial Folds:** Softens the deep folds around the mouth and nose by lifting the surrounding skin.

### Benefits:

- **Non-Surgical:** The V-lift is minimally invasive and does not involve the extensive cutting or long recovery associated with a traditional facelift.
- **Immediate Results:** Patients see an instant lift after the procedure, with continued improvement as collagen production increases.
- **Natural-Looking Lift:** The threads lift the skin subtly, giving a natural, refreshed appearance rather than a tight or “pulled” look.
- **Collagen Boost:** By stimulating collagen production, the procedure enhances skin texture, firmness, and elasticity even after the threads dissolve.
- **Minimal Downtime:** Most patients can resume normal activities within a few days, making it a popular choice for those seeking quick results with minimal disruption.
- **Temporary and Adjustable:** Since the threads are absorbable, the lift is not permanent, lasting about 12 to 18 months. This allows patients to adjust their treatment as they age or opt for repeat procedures.
- **Safe and Low-Risk:** Thread lifts are generally low-risk, with side effects limited to mild swelling, bruising, or discomfort at the injection sites.

V-lift is a non-surgical facial rejuvenation technique designed to lift and contour sagging skin, particularly around the jawline, cheeks, and neck, to create a youthful, V-shaped face. This minimally invasive procedure provides immediate results, stimulates collagen production for long-lasting effects, and requires little downtime, making it a popular alternative to traditional facelifts.

## SWEATOX

500/unit

*Sweatox refers to the use of Botox (Botulinum toxin) injections to treat excessive sweating or hyperhidrosis. Botox, widely known for its cosmetic applications in reducing wrinkles, can also block the nerves that stimulate sweat glands, effectively reducing sweating in targeted areas such as the armpits, hands, feet, or face.*

### How Sweatox Works:

- Botox is injected into the skin in areas with excessive sweating.
- The botulinum toxin blocks the chemical signals from the nerves that activate the sweat glands. Without these signals, the sweat glands stop producing excessive amounts of sweat.
- The treatment temporarily reduces sweating in the treated areas while allowing normal sweating elsewhere on the body to maintain overall thermoregulation.

### Uses:

- Primary Axillary Hyperhidrosis (Excessive Underarm Sweating): Sweatox is most commonly used to treat underarm sweating that is not controlled by antiperspirants or other treatments.
- Palmar Hyperhidrosis (Excessive Sweating of the Hands): It can help reduce excessive hand sweating, improving comfort and social confidence.
- Plantar Hyperhidrosis (Excessive Sweating of the Feet): Reduces sweating in the feet, particularly beneficial for those with sweaty feet that cause discomfort or odor.
- Facial Sweating: Can be used to target areas of excessive sweating on the face, such as the forehead or scalp.

### Benefits:

- Significant Reduction in Sweating: Sweatox can reduce sweating by up to 80%-90% in the treated areas, providing relief for those suffering from hyperhidrosis.
- Non-Surgical and Minimally Invasive: The procedure involves only small injections, making it a non-invasive alternative to more permanent solutions like surgery.
- Quick Procedure with Minimal Downtime: The treatment takes about 10-30 minutes, depending on the area being treated, and requires minimal recovery time.
- Improved Quality of Life: By reducing excessive sweating, Sweatox can improve confidence and comfort, especially in social or professional settings.
- Long-Lasting Results: While temporary, the effects of Sweatox last for several months (typically 4 to 6 months), after which follow-up treatments can be done to maintain results.

Sweatox is a Botox-based treatment for excessive sweating, particularly in areas like the underarms, hands, feet, and face. It works by blocking the nerve signals that trigger sweating, offering significant relief from hyperhidrosis. The procedure is minimally invasive, offers long-lasting results, and can greatly improve the quality of life for those dealing with excessive sweating.

## REGENLAB PRP

25,000

*RegenlabPRP refers to a specialized Platelet-Rich Plasma (PRP) treatment system developed by RegenLab, a company known for its innovative technologies in regenerative medicine. PRP therapy involves using a patient's own blood, which is processed to concentrate the platelets. These platelets are rich in growth factors that promote tissue repair, healing, and regeneration. Regenlab'sPRP system ensures a safe, high-quality preparation of PRP that is widely used in aesthetic, orthopedic, and wound healing applications.*

### How RegenlabPRP Works:

- **Blood Extraction:** A small sample of the patient's blood is drawn. **Centrifugation:** The blood is processed in a centrifuge, which separates the blood components. This step isolates the platelet-rich plasma, which contains a high concentration of growth factors.
- **Injection:** The PRP is then injected into the target area, such as the skin, scalp, or joints, to stimulate tissue repair and regeneration.

### Uses:

- **Aesthetic Treatments: Skin Rejuvenation:** PRP is used to improve skin texture, reduce fine lines, and boost overall skin vitality. It is sometimes referred to as the "vampire facial."
- **Acne Scars and Wrinkles:** PRP helps to reduce the appearance of acne scars and wrinkles by promoting collagen production and skin healing.
- **Hair Restoration:**PRP is commonly used to treat hair loss and thinning hair. By injecting PRP into the scalp, it can stimulate hair follicles, improving hair density and growth.
- **Orthopedic Applications:**PRP is also used to treat injuries and chronic conditions such as joint pain, arthritis, and tendon injuries by promoting tissue healing and reducing inflammation.
- **Wound Healing:** It accelerates the healing of wounds, especially in cases of chronic or difficult-to-heal wounds.

### Benefits:

- **Natural Treatment:** Since PRP is derived from the patient's own blood, there is minimal risk of allergic reactions or complications.
- **Promotes Collagen Production:** In aesthetic treatments, PRP enhances collagen production, which helps in skin rejuvenation, reducing wrinkles and improving overall skin texture.
- **Boosts Hair Growth:** In hair restoration, PRP helps stimulate hair follicles, encouraging thicker, healthier hair growth in areas affected by thinning.
- **Accelerates Healing:** In both aesthetic and orthopedic treatments, PRP helps speed up the body's natural healing processes, promoting tissue regeneration and reducing inflammation.

- **Minimally Invasive:** PRP injections are a non-surgical, minimally invasive procedure, making it a relatively safe option with minimal downtime.
- **Long-Lasting Results:** The benefits of PRP treatment can last for several months, particularly in skin and hair treatments, with results continuing to improve over time as collagen and tissue regeneration take place.

RegenlabPRP is a cutting-edge PRP therapy system that utilizes the patient's own blood to concentrate growth factors and promote healing and tissue regeneration. It is widely used for skin rejuvenation, hair restoration, orthopedic treatments, and wound healing, offering a natural and minimally invasive option with long-lasting benefits.

## COSMELAN PEEL

35,000

*CosmelanPeel is a specialized chemical peel treatment designed to reduce hyperpigmentation, melasma, and uneven skin tone. Developed by the Spanish company Mesoestetic, the Cosmelanpeel is known for its effectiveness in brightening the skin and promoting a more uniform complexion. It combines a variety of active ingredients that work together to inhibit melanin production and exfoliate the skin.*

### How CosmelanPeel Works:

- **Inhibition of Melanin Production:** The active ingredients in the peel target the enzymes responsible for melanin production, helping to reduce pigmentation.
- **Exfoliation:** The peel promotes the exfoliation of the outer layers of the skin, removing dead skin cells and encouraging the regeneration of new, healthier skin.
- **Improved Skin Texture:** By removing damaged skin cells and promoting cell turnover, Cosmelan can improve skin texture, making it smoother and more radiant.

### Key Ingredients:

- **Kojic Acid:** A natural compound that helps inhibit melanin production and has antioxidant properties.
- **Azelaic Acid:** Reduces inflammation, unclogs pores, and helps to even out skin tone.
- **Phytic Acid:** A gentle exfoliant that aids in the reduction of pigmentation and improves overall skin appearance.
- **Salicylic Acid:** A beta hydroxy acid (BHA) that helps to exfoliate the skin and unclog pores.

### Uses:

- **Hyperpigmentation:** Cosmelan is primarily used to treat conditions such as melasma, sunspots, and post-inflammatory hyperpigmentation.
- **Uneven Skin Tone:** It helps to achieve a more even skin tone by reducing the appearance of dark spots and discoloration.
- **Skin Brightening:** The treatment enhances overall skin brightness, making the skin look more luminous.
- **Acne Treatment:** The exfoliating properties of the peel can also benefit those with acne-prone skin by reducing clogged pores and breakouts.

### Procedure:

- **Consultation:** A skin consultation is typically performed to assess skin type and concerns. Application:
- The Cosmelan peel is applied in the clinic by a trained professional. It usually involves the application of the peel followed by a specific aftercare regimen.
- **At-Home Maintenance:** Patients are provided with a maintenance kit that includes products to help prolong the results of the peel and ensure proper skin care during recovery.

#### Recovery and Results:

- **Initial Reactions:** After the peel, patients may experience redness, peeling, and sensitivity, which are normal and expected. This usually subsides within a few days.
- **Visible Results:** Many patients notice a significant reduction in pigmentation and an improvement in skin tone within a few weeks, with optimal results typically visible after about 2-3 months.
- **Long-Lasting Effects:** With proper sun protection and skincare, the results of the Cosmelan peel can last for several months to years.

#### Benefits:

- **Effective for Various Skin Types:** Suitable for a wide range of skin types and tones, including those with sensitive skin.
- **Minimal Downtime:** While some peeling and redness may occur, downtime is generally minimal compared to more invasive treatments.
- **Long-Lasting Results:** When combined with a proper skincare routine, results can be long-lasting, making it an excellent option for those seeking to manage pigmentation issues.

The CosmelanPeel is a powerful treatment for reducing hyperpigmentation and achieving a more even skin tone. It combines various active ingredients to inhibit melanin production and promote exfoliation, resulting in brighter, smoother skin with minimal downtime. This treatment is effective for various skin concerns, particularly melasma and sun-induced discoloration.

## WART / SKIN TAG REMOVAL

Starts at 2,500

Wart Removal and Skin Tag Removal are cosmetic procedures aimed at eliminating unwanted growths on the skin. Although they may seem similar, warts and skin tags are different types of skin lesions with distinct causes and characteristics.

### **Benefits of Wart Removal:**

- **Improved Appearance:** Removing warts can enhance the skin's appearance and boost self-confidence.
- **Discomfort Relief:** Warts can sometimes be painful or irritating, especially if located on weight-bearing areas (e.g., feet).
- **Preventing Spread:** Removing warts can help prevent the spread of HPV to other areas of the body or to other people.

### **Benefits of Skin Tag Removal:**

- **Aesthetic Improvement:** Removing skin tags can enhance the appearance of the skin, particularly for those who find them unsightly.
- **Comfort:** Skin tags can become irritated, especially if they rub against clothing or jewelry, and removal can alleviate discomfort.
- **Preventing Recurrence:** Although skin tags are harmless, their removal may help reduce the likelihood of developing new ones in the future.

# LONGEVITY INTERVENTIONS

## CONTRAST THERAPY

*Revitalize your body and mind with our Contrast Therapy experience—an ancient wellness practice designed to enhance circulation, reduce inflammation, and promote deep relaxation.*

*Contrast Therapy involves alternating between a hot bath and a cold plunge. This contrast between extreme temperatures stimulates the body's natural healing response, improving blood flow and reducing muscle tension.*

### Benefits of Contrast Therapy

- ✓ Boosts Circulation & Detoxification – Improves blood flow, oxygen delivery, and lymphatic drainage.
- ✓ Reduces Muscle Soreness & Inflammation – Ideal for post-workout recovery or chronic pain relief.
- ✓ Enhances Immune Function – Supports the body's resilience against illness and fatigue.
- ✓ Improves Mental Clarity & Mood – The cold plunge releases endorphins, helping to reduce stress and anxiety.
- ✓ Supports Longevity & Skin Health – Encourages collagen production and cellular regeneration.

### Who Can Benefit?

- ✓ Athletes & active individuals for faster muscle recovery
- ✓ Wellness seekers looking for stress relief & deep relaxation
- ✓ Anyone experiencing chronic pain, inflammation, or fatigue

# PEPTIDE THERAPY

## Peptides: The Next Frontier in Medicine

Php 479, 200.00

*Unlocking Longevity, Precision, and Cellular Health*

### What Are Peptides?

Peptides are short chains of 2–50 amino acids, the building blocks of proteins. They occur naturally in the body and act as signaling molecules, regulating critical processes like immunity, hormone production, and tissue repair. Unlike large proteins, peptides are small enough to penetrate cells and interact with specific receptors, making them highly targeted therapeutic agents.

### Key Benefits of Peptides

#### 1. Cellular Repair & Longevity:

- Peptides like Epitalon and Thymosin Beta-4 activate pathways linked to telomere maintenance and tissue regeneration. Studies show peptides can extend healthspan by enhancing autophagy (cellular "cleanup") and DNA repair (Khavinson et al., 2003; Aging Research Reviews).

#### 2. Anti-Inflammatory Action:

- Peptides such as BPC-157 and LL-37 modulate cytokines (e.g., TNF- $\alpha$ , IL-6), reducing chronic inflammation tied to aging and diseases like arthritis (Sikiric et al., 2021; Frontiers in Immunology).

#### 3. Metabolic Optimization:

- Peptides like Tesamorelin improve insulin sensitivity and reduce visceral fat, addressing metabolic syndrome and age-related weight gain (Stanley et al., 2011; Journal of Clinical Endocrinology & Metabolism).

#### 4. Precision Medicine:

- Peptides can be engineered to target specific cells or receptors, minimizing side effects compared to broadacting drugs.

## Why Peptides Are the Future of Medicine

### 1. Targeted Therapies:

Peptides bridge the gap between small-molecule drugs (limited specificity) and biologics (large, complex proteins). Their precision reduces collateral damage to healthy tissues.

### 2. Versatility:

Over 100 peptide-based drugs are in clinical trials for conditions ranging from cancer and diabetes to neurodegenerative diseases (e.g., Alzheimer's).

### 3. Aging Reversal:

Peptides like Epithalon and GHRP-6 show promise in slowing biological aging by restoring youthful gene expression, tissue regeneration and hormone balance.

### 4. Advancements in Delivery:

Innovations in oral, nasal, and transdermal delivery systems are overcoming historical challenges with peptide stability and absorption.

## Join the Peptide Revolution

This 1-year study explores peptides' potential to extend healthspan—the period of life spent in good health. By participating, you'll contribute to a paradigm shift in medicine while gaining personalized insights into your biological resilience.

"Peptides represent a new era of medicine—one where aging is not inevitable, but modifiable."  
Gaia Longevity

## KEY LONGEVITY PEPTIDES & PROTOCOLS ( 1 YEAR PLAN )

**NOTE: DOSING RANGES ARE GENERAL; ADJUST BASED ON TOLERANCE AND MEDICAL GUIDANCE.**

### 1.EPITALON ( EPITHALON )

**PURPOSE:** Telomere maintenance, pineal gland support, circadian rhythm regulation.

**DOSE:** 5 - 10 mg subQ daily for 10 - 20 days, 2 - 3 cycles per year.

**CYCLE:** 10 -20 days on, 3 - 6 months off ( to avoid receptor desensitization ).

### 2.THYMALIN ( THYMIC PEPTIDES )

**PURPOSE:** Immune system rejuvenation, thymus regeneration, DNA repair.

**DOSE:** 10 mg subQ daily for 10 days, 2 - 3 cycles per year.

**PAIR WITH:** Epitalon ( synergistic for telomere and immune health ).

### 3.BPC - 157

**PURPOSE:** Gut health, systemic anti-inflammation, tissue repair.

**DOSE:** 250 - 500 mcg subQ daily, 4 - 6 weeks on, 4 weeks off.

**USE:** Prioritize gut barrier repair and reduce chronic inflammation ( a root cause of aging ).

### 4.GHK - Cu

**PURPOSE:** Collagen anythesis, stemcell activation, antioxidant effects.

**DOSE:** 1 -2 mg subQ daily, 8 - 12 weeks on, 4 weeks off.

**BENEFITS:** Skin rejuvenation, wound healing, and epigenetic modulation.

### 5.TA - 1 ( THYMOSIN ALPHA - 1 )

**PURPOSE:** Immune modulation, reduces age-related immune decline ( immunosenescence ).

**DOSE:** 1.6 - 3.2 mg subQ weekly, 4 - 6 weeks on, 2 months off.

### 6.MOTS - c

**PURPOSE:** Mitochondrial optimazation, insulin sensitivity, metablic health.

**DOSE:** 5 - 10 mg subQ weekly, 8 - 12 weeks on, 4 weeks off.

### 7.SELANK ( OPTIONAL )

**PURPOSE:** Stress resilience ( via GABA modulation ), neuroprotection.

**DOSE:** 250 - 500 mcg subQ daily, 4 -6 weeks on, 4 weeks off.

## PHASE 1 ( MONTHS 1 - 3 )

**EPITALON + THYMALIN:** 10 - day cycle ( synergistic for telomere / immune health ).

**BPC - 157:** Daily for gut / systemic repair.

**GHK - Cu:** Daily for collagen / stemcell support.

## PHASE 2 ( MONTHS 4- 6 )

**TA - 1:** Weekly for immune modulation.

**MOTS - c:** Weekly for mitochondrial / metabolic health.

**SELANK:** Daily for stress / neuroprotection.

## PHASE 3 ( MONTHS 7 -9 )

**Repeat Epitalon + Thymalin cycle.**

**GHK - Cu:** Resume for skin / joint health.

## PHASE 4 ( MOTNHS 10 -12 )

**BPC - 157:** Final cycle for maintenance.

**MOTS - c:** Optimize metabolic resilience.

## EPHITALON (10 DAYS )

Php 75,000.00

Epitalon is a strong anti aging peptide that promote anti-aging by stimulating telomerase, an enzyme that helps maintain cellular health. It's also thought to regulate sleep through melatonin production, support immune function, and provide antioxidant effects.

### Benefits:

- **Anti-Aging:** Epitalon slows cellular aging by stimulating telomerase, which helps maintain telomere length.
- **Improved Sleep:** It regulates melatonin production, aiding in better sleep and more stable circadian rhythms.
- **Immune System Support:** Epitalon enhances immune function by promoting the production of immune cells.
- **Antioxidant Properties:** It reduces oxidative stress by neutralizing free radicals, protecting cells from damage.
- **Longevity:** Research indicates it can extend lifespan and promote overall vitality.

### Research and Studies on Ephitalon

- **Anti-Aging & Telomeres:** A study conducted in Russia with 79 elderly patients found that Epitalon increased telomere length in 90% of participants after a year of treatment, suggesting its role in reducing cellular aging .
- **Longevity:** A long-term study involving 266 elderly people treated with Epitalon over 6 years reported a 1.6–1.8 times lower mortality rate compared to the control group, suggesting an increase in overall lifespan .
- **Immune System Support:** In a clinical trial with 34 patients, Epitalon enhanced immune response, increasing the activity of T- cells and boosting the immune system over a course of three years .
- **Improved Sleep:** A smaller study with 14 elderly patients found that Epitalon significantly improved sleep quality and increased melatonin levels after a 20-day treatment period .

These studies provide promising data, though additional large-scale clinical trials would help confirm Epitalon's benefits in humans.

### How Does Ephitalon Work?

Epitalon works primarily by stimulating the production of an enzyme called telomerase, which helps maintain and elongate telomeres—the protective caps at the ends of chromosomes. As we age, telomeres naturally shorten, leading to cellular aging and reduced cell function. By activating telomerase, Epitalon helps preserve telomere length, promoting cellular health and longevity.

Additionally, Epitalon influences the pineal gland to regulate melatonin production, which supports better sleep and helps synchronize circadian rhythms. It also has antioxidant properties, neutralizing free radicals and reducing oxidative stress. Together, these effects contribute to Epitalon's potential in supporting anti-aging, immune function, and overall well-being.

## Safety and Side Effects

Epitalon is generally considered safe for use, with a low incidence of side effects reported in clinical studies. Most users tolerate it well, experiencing minimal or no adverse effects. Some individuals may report mild reactions such as temporary headaches, dizziness, or gastrointestinal discomfort, but these are typically short-lived and not severe.

Since Epitalon is a naturally occurring peptide, it is believed to have a favorable safety profile compared to synthetic drugs. Long-term studies have not indicated any serious or lasting side effects, making it a promising option for those seeking potential anti-aging and health benefits. However, as with any supplement, it's advisable to consult with a healthcare professional before starting any new regimen, especially for individuals with underlying health conditions.

## FAQs:

**What is Epitalon used for?** Epitalon is primarily used for its potential anti-aging effects, including promoting cellular health, improving sleep quality, and enhancing immune function.

**How is Epitalon administered?**

Epitalon can be administered through subcutaneous injections or as an oral supplement, depending on the formulation and intended use.

**How long does it take to see results from Epitalon?**

Some users report improvements in sleep and overall well-being within a few weeks, while more significant anti-aging effects may take several months of consistent use.

**Who should avoid using Epitalon?**

Individuals with serious health conditions, pregnant or breastfeeding women, and those taking specific medications should consult a healthcare provider before using Epitalon.

**Injection method:**

Subcutaneous injection on the fat tissue, on the belly, thighs, or butt.

**Dosage:**

10mg daily, at night before sleep

**Amount in vial :** 10mg

**Solution :** 0.4ml

**To inject:**0.4ml

**Best time to inject :**In the morning / At night

**Best taken while not digest food for** 2 hours

**Duration:** 10 days on 6 months off

**To notice:**

Deep & REM sleep

**Note:**

- normal to bruise on the injection sites sometimes.
- Alcohol consumption can make ephitalon work less effective

**Water to use:**

- Normal NSS : good for a month
- Bacteriostatic water : good for 3 months

## **TIRZEPATIDE ( 3 Months )**

Php 110,000.00

Tirzepatide is used for managing type 2 diabetes and can also aid in weight loss. By acting on both GLP-1 and GIP receptors, it helps control blood sugar levels and promotes weight reduction. Its dual mechanism of action makes it effective in improving glycemic control and reducing body weight, which can be beneficial for patients with type 2 diabetes who are also struggling with obesity.

### **Benefits:**

**Improved Glycemic Control :** It helps lower blood sugar levels by enhancing insulin secretion and reducing glucagon levels. **Weight Loss :** It can lead to significant weight reduction, which is beneficial for patients with type 2 diabetes who are overweight or obese. **Reduced HbA1c Levels :** Helps lower HbA1c, a marker of long-term blood glucose levels. **Potential Cardiovascular Benefits :** Emerging research suggests it may offer cardiovascular benefits, though more studies are needed. **Convenient Administration :** It's administered once weekly, which can improve adherence compared to more frequent dosing regimens.

### **Research and Studies on Tirzepatide**

**Research on Tirzepatide in Type 2 Diabetes: Efficacy in Reducing HbA1c and Weight Loss:** In this trial, participants with type 2 diabetes treated with tirzepatide 5 mg, 10 mg, or 15 mg showed significant reductions in HbA1c levels compared to placebo. The 15 mg dose reduced HbA1c by 2.0 percentage points, versus 1.1 percentage points for placebo. Patients on 15 mg also experienced an average weight loss of 11.2 kg (24.7 lbs).

**Research on Comparative Efficacy of Tirzepatide vs. Semaglutide: Impact on HbA1c and Weight Loss :** Compared tirzepatide (10 mg and 15 mg) to semaglutide (1 mg). Tirzepatide 15 mg achieved a 2.4 percentage point reduction in HbA1c compared to 1.9 percentage points for semaglutide. Weight loss for tirzepatide was about 11.3 kg (24.9 lbs) versus 8.0 kg (17.6 lbs) for semaglutide.

**Research on Tirzepatide for Weight Loss in Obesity Without Diabetes: Impact on Body Weight Reduction:** This study focused on weight loss in individuals with obesity or overweight without type 2 diabetes. Participants on tirzepatide 10 mg or 15 mg achieved a mean weight loss of 15.0% and 20.9% of their body weight, respectively, compared to 3.1% for the placebo group.

### **How Does Tirzepatide Work?**

Tirzepatide works by mimicking the effects of two hormones, GLP-1 and GIP, which play a role in regulating blood sugar and appetite. It enhances insulin secretion from the pancreas in response to high blood sugar, reduces glucagon levels to lower blood glucose, slows gastric emptying to manage post-meal sugar spikes, and decreases appetite by acting on the brain's hunger signals. This multifaceted approach helps improve blood sugar control and support weight loss.

## **Safety and Side Effects**

### **Side effects:**

Common side effects included nausea (up to 27% of patients on the 15 mg dose) and vomiting. The frequency of these side effects decreased over time.

### **Safety:**

Overall, tirzepatide is generally well-tolerated, but it's important for patients to be monitored for these potential side effects and to consult with their healthcare provider about any concerns.

## **FAQs**

Tirzepatide is a medication used primarily for the treatment of type 2 diabetes and, more recently, for weight management. Here are some common FAQs:

### **What is tirzepatide ?**

Tirzepatide is a medication that mimics the effects of two hormones, GLP-1 and GIP, which help regulate blood sugar levels and appetite.

### **How does tirzepatide work ?**

It enhances insulin secretion, reduces glucagon levels, slows gastric emptying, and decreases appetite.

### **What are the primary uses of tirzepatide ?**

It is used to manage blood sugar levels in people with type 2 diabetes and has also been approved for weight loss in individuals with obesity.

### **What are the common side effects ?**

Common side effects include nausea, vomiting, diarrhea, and decreased appetite. Some people may experience more severe effects, so it's important to discuss any concerns with a healthcare provider.

### **Who shouldn't use tirzepatide ?**

Tirzepatide should not be used in individuals with a history of medullary thyroid carcinoma or multiple endocrine neoplasia syndrome type 2.

### **How is tirzepatide administered ?**

- It is typically administered as a subcutaneous injection.

**Injection Method:**

Subcutaneous injection on the fat tissue, on the belly, thighs, or butt.

**Dosage:**

**Weeks 1-4:** 2.5 mg per injection, once a week

To inject: 0.25ml

**Weeks 5-8:** 5 mg per injection, once a week

To inject: 0.5ml

**Weeks 9-12:** 7.5 mg per injection, once a week

To inject: 0.75ml Split into 2 different injection sites.

**Week 13-16 ( OPTIONAL ):** 10mg per injection, once a week

To inject: 1ml Split into 2 different injection sites.

**Amount in vial: 10 mg**

**Solution: 1ml**

**Duration:**

2 month- 3 month / if needed

**Best Time to Inject:**

At night before sleep

Don't digest food for 1 hour.

**Water to use:**

- Normal NSS : good for a month
- Bacteriostatic water : good for 3 month

**To notice:**

- Suppress appetite .
- Significant weight loss

**Note:**

Alcohol can make tirzepatide less effective.

## **SELANK ( 2 Months )**

Php 45,000.00

Selank is a peptide that is often used for its potential anxiolytic (anxiety-reducing) and nootropic (cognitive-enhancing) effects. It's sometimes used to improve mood, reduce stress, and enhance cognitive function.

### **Benefits:**

- Reduces Anxiety : Selank effectively reduces symptoms of anxiety and stress.
- Enhances Cognitive Function : It improves cognitive functions such as memory, attention, and learning.
- Stabilizes Mood : Selank helps stabilize mood and alleviates symptoms of depression.
- Protects the Brain : It offers protective effects on the brain, guarding against cognitive decline and damage.
- Supports Immune System : Selank positively affects the immune system.

### **Research and Studies on Selank**

#### **Anxiolytic Effects :**

Dose Range : Selank has been studied in doses ranging from 0.15 mg to 0.45 mg/kg. Studies suggest that it reduces anxiety by up to 20-30% in certain behavioral models of anxiety.

#### **Cognitive Enhancement :**

In animal studies, Selank showed a 20-25% improvement in learning and memory performance in rodents subjected to stress conditions.

#### **Antidepressant Effects :**

Some studies suggest that Selank can reduce symptoms of depression by around \*30-40%\* compared to placebo in animal models.

#### **Immunomodulatory Effects :**

Selank has been shown to increase the production of interferon-gamma by \*50-70%\*, indicating a potential immune-boosting effect.

#### **Pharmacokinetics :**

Selank has a \*half-life of 2-4 hours\*, and it is rapidly absorbed when administered intranasally, which is the most common method of administration.

### **How Does Selank Work?**

Selank is a synthetic peptide derived from the human peptide tuftsin, known for its nootropic and anxiolytic effects. It works by modulating the GABAergic system to reduce anxiety without sedation, while also enhancing cognitive functions by increasing brain-derived neurotrophic factor (BDNF) and regulating neurotransmitters like serotonin and dopamine. Additionally, Selank has immune-modulating and potential antiviral properties, making it beneficial for stress-related immune dysfunctions. It is typically used to alleviate anxiety, improve mood, and enhance cognitive performance, though its use is mainly in Russia, with ongoing research into its long-term effects.

## Safety and Side Effects

In clinical trials, Selank has shown a good safety profile with no significant side effects reported.

## FAQs

**What is Selank?** Selank is a synthetic peptide based on tuftsin, a natural peptide involved in immune function. It is primarily used for its nootropic (cognitive-enhancing) and anxiolytic (anxiety-reducing) properties.

**How does Selank work?**

Selank modulates the GABAergic system to reduce anxiety, enhances cognitive function by increasing brain-derived neurotrophic factor (BDNF) levels, and regulates neurotransmitters like serotonin and dopamine. It also has immune-modulating properties, helping to balance immune responses under stress.

**What are the main benefits of using Selank?**

The primary benefits include reducing anxiety without causing sedation, improving cognitive functions such as memory and focus, and supporting the immune system, especially in stressful situations.

**How is Selank administered?**

Selank is typically administered as a nasal spray or via subcutaneous injection.

**Is Selank safe?**

Selank is generally considered safe with few reported side effects.

**Can Selank be used long-term?**

While short-term use of Selank is generally well-tolerated, long-term effects are still being researched.

**How quickly does Selank take effect?**

The effects of Selank can vary, with some users reporting noticeable effects within minutes to hours after administration, particularly in terms of reduced anxiety. Cognitive benefits may take a few days to become noticeable.

**What is the difference between Selank and Semax?**

Both Selank and Semax are Russian-developed peptides used for cognitive enhancement and stress reduction, but they work differently. Selank is more focused on reducing anxiety and has immune-modulating effects, while Semax is more geared toward enhancing cognition and neuroprotection.

**Injection method:**

Subcutaneous injection on the fat tissue, on the belly, thighs, or butt.

**Dosage:**

500mcg per injection, Daily

**Duration:** 1-2 months on 1 month off

**Amount In vial:** 5mg

**Solution:** 2ml

**To inject:** 0.2ml

**Best time to inject :** in the morning / At night

do not digest food for 2 hours for maximum result.

**To notice:**

- improve memory
- reduce anxiety

**Note:**

- alcohol can make Selank work less effective.

**Water to use:**

- Normal NSS : good for a month
- Bacteriostatic water : good for 3 months

## HEXARELIN ( 3 Months )

Php 45,000.00

Hexarelin is a synthetic peptide that functions as a growth hormone secretagogue, meaning it stimulates the secretion of growth hormone (GH) from the pituitary gland. It is structurally similar to ghrelin, the natural hormone that triggers hunger and GH release. Hexarelin is often used in research and bodybuilding to promote muscle growth, enhance fat loss, and improve recovery times due to its ability to increase GH levels.

### Benefits:

- **Increased Growth Hormone Levels :** Hexarelin stimulates the pituitary gland to release growth hormone, which can aid in muscle growth, fat loss, and overall recovery.
- **Enhanced Muscle Growth :** Due to increased GH levels, Hexarelin may support muscle hypertrophy, making it popular among athletes and bodybuilders.
- **Improved Fat Loss :** Elevated GH levels can enhance fat metabolism, leading to a reduction in body fat.
- **Faster Recovery :** Hexarelin may improve tissue repair and recovery times after workouts or injuries.
- **Strengthened Immune System :** Growth hormone plays a role in immune function, so Hexarelin might help in boosting immune system resilience.
- **Cardioprotective Effects :** Some studies suggest Hexarelin may have protective effects on the heart, improving heart function and potentially reducing the risk of heart disease.
- **Anti-Aging Benefits :** By boosting GH levels, Hexarelin may help in reducing the signs of aging, such as wrinkles and decreased vitality.

### Research and Studies on Hexarelin

#### Growth Hormone Secretion :

**Study Example:** In a study conducted on healthy adult males, Hexarelin was administered in doses ranging from 1 to 2 µg/kg. The results showed a significant increase in growth hormone levels, with GH levels peaking at around 20-30 ng/mL within 30 minutes of administration. Compared to baseline, GH levels increased by approximately 400-600%. **Another Study:** In elderly subjects, Hexarelin administration resulted in a **\*\*2-3 fold increase\*** in GH secretion compared to baseline.

#### Cardiovascular Health :

**Animal Study Data:** In rat models with induced heart failure, Hexarelin administration for 4 weeks resulted in a **\*\*35-50% improvement** in left ventricular function compared to untreated rats. Additionally, there was a 30-40% reduction in myocardial fibrosis, indicating less scarring of heart tissue. **Human Study Data:** In a small-scale human trial involving patients with coronary artery disease, Hexarelin administration improved heart function by increasing the ejection fraction (a measure of how much blood the heart pumps out with each contraction) by approximately 10-15% after 6 months of treatment.

#### Metabolic Effects :

**Fat Reduction:** In a study involving rodents, Hexarelin treatment resulted in a 10-15% reduction in body fat over a 3-week period. At the same time, lean body mass increased by 5-7%. **Lipid Profile Improvement:** In another study, Hexarelin was shown to reduce total cholesterol levels by 15- 20% and increase HDL ("good") cholesterol levels by 10-12%.

### **Neuroprotective Effects :**

**Oxidative Stress Reduction:** In a study investigating Hexarelin's effects on neurons, Hexarelin reduced oxidative stress markers by approximately 25-30%, which indicates its potential to protect brain cells from damage.

**Cognitive Function:** In animal models of Alzheimer's disease, Hexarelin treatment improved memory and cognitive function by 20- 25% compared to control groups.

### **Bone Health :**

**Bone Density Improvement:** In a study on rats with osteoporosis, Hexarelin treatment for 8 weeks led to a 15- 20% increase in bone mineral density (BMD) compared to untreated rats. This suggests potential benefits in strengthening bones.

### **Potential Side Effects :**

**Cortisol Levels:** In human studies, Hexarelin was shown to increase cortisol levels by approximately 20-25% following administration. This is significant as elevated cortisol can lead to stress-related effects.

**Prolactin Levels:** Prolactin levels were also observed to increase by 15-20% in some subjects, which could potentially impact reproductive health and other hormone-related functions.

### **How Does Hexarelin Work ?**

Hexarelin is a synthetic peptide that stimulates the pituitary gland to release growth hormone (GH) by mimicking the effects of ghrelin, a natural hormone that regulates appetite and GH secretion. It binds to the ghrelin receptor (GHS-R1a) on the pituitary gland, triggering an increase in GH levels in the bloodstream. This elevated GH can lead to various effects, such as enhanced muscle growth and fat metabolism. Common and Side Effects :

- **Water Retention :** This can lead to bloating and swelling.
- **Joint Pain :** Some users may experience discomfort or pain in the joints.
- **Headaches :** Increased GH levels can cause headaches.
- **Nausea :** Some individuals may feel nauseous after administration.
- **Potential for Insulin Resistance :** Long-term use might affect insulin sensitivity.

### **Safety**

Hexarelin has a generally favorable safety profile, with most users experiencing minimal and mild side effects, and serious adverse reactions being rare; however, it's important to consult with a healthcare professional before use.

### **Injection method:**

Subcutaneous injection on the fat tissue, on the belly, thighs, or butt.

Dosage: 250mcg daily

Amount in vial: 5mg

Solution: 2ml To inject: 0.1ml

Duration: ideally 2-3 month / if needed

Best time to inject: In the morning

Best taken while not digest food for 1 hours

To notice:

-faster metabolism

-energy boost

Note: Alcohol consumption can make Hexarelin work less effective

Water to use:

-normal NSS: good for a month

-bacteriostatic water: good for 3 months

# MESENCHYMAL STEM CELL THERAPY

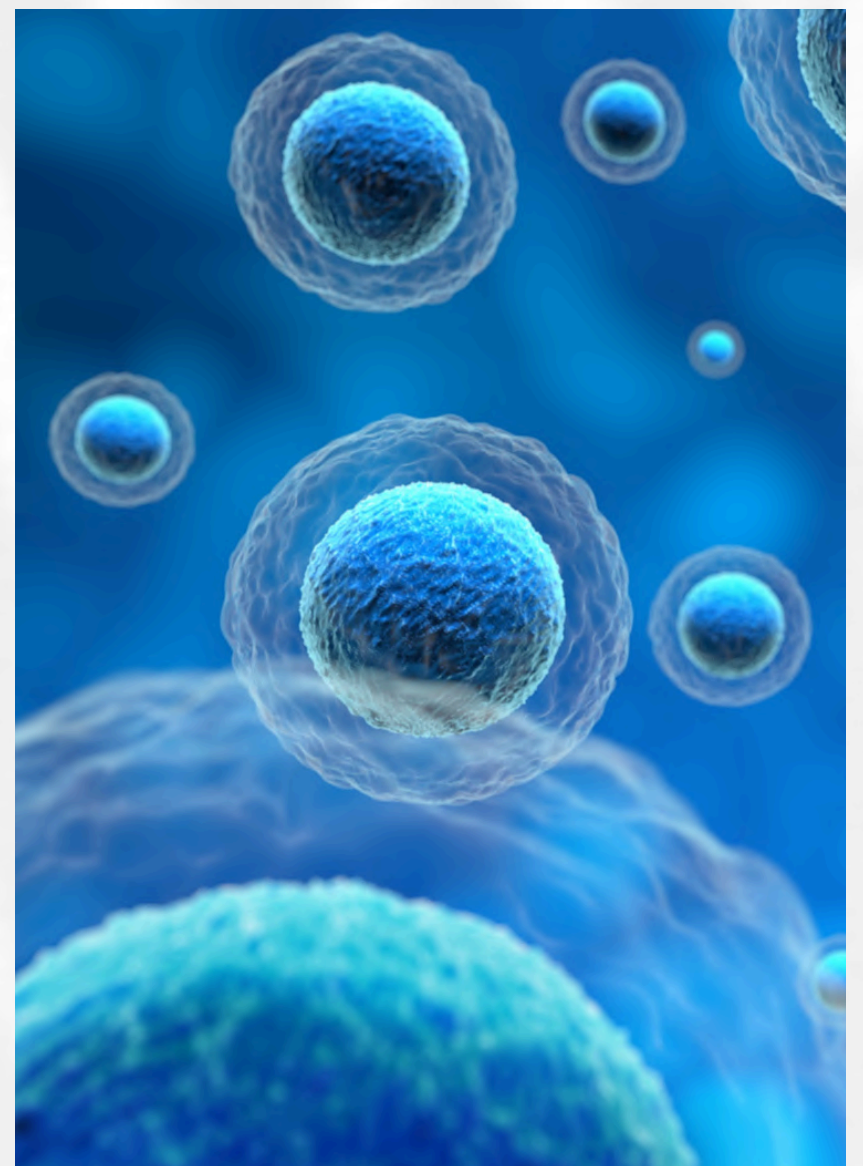

## What Are Stem Cells? Why They Are the Future of Medicine?

Stem cells are the body's master cells capable of developing into different cell types, such as skin, muscle, or nerve cells. They play a critical role in tissue repair, regeneration, and the maintenance of healthy bodily functions.

### Types of Stem Cells

- **Embryonic Stem Cells:** Derived from embryos; highly versatile but ethically controversial.
- **Adult Stem Cells:** Found in tissues like bone marrow; limited in flexibility.
- **Placental Stem Cells:** Ethically sourced from post-birth placental tissue, offering a unique balance of potency and accessibility. These are among the safest and most potent types of stem cells used today.

### Why Stem Cells Are the Future of Medicine

- **Regeneration at the Cellular Level:** Stem cells repair damaged tissues, restoring function and promoting healing in ways traditional medicine cannot.
- **Broad Applications Across Diseases:** From regenerating heart tissue after a heart attack to reversing neurodegeneration in conditions like Parkinson's disease, stem cells are reshaping treatment possibilities.
- **Personalized Medicine:** Stem cell therapies can be tailored to the patient's unique biology, providing more effective and targeted treatments.
- **Anti-Aging Breakthroughs:** Stem cells rejuvenate skin, joints, and organs, addressing the root causes of aging at the cellular level.
- **Ethical and Accessible Options:** Advances in placental stem cells offer an ethically sound and readily available source of powerful therapeutic cells.

### A New Era of Medicine

Stem cell therapies mark a revolutionary shift toward regenerative medicine, enabling the body to heal itself. Placental-derived stem cells, in particular, stand out for their potential in anti-aging and a wide range of treatments.

## Anti-Aging Benefits of Non-Expanded Allogeneic Placental Stem Cells

### Harnessing the Power of Placental Stem Cells for Youthful Vitality

Placental stem cells work at the cellular level to rejuvenate, restore, and repair aging tissues. These cells are ethically sourced and processed without manipulation, offering unparalleled safety and effectiveness. neurodegenerative risks.

### Anti-Aging Benefits

- Cellular Rejuvenation: Repairs damaged cells and promotes the regeneration of youthful, healthy tissues.
- Collagen Boosting: Stimulates collagen synthesis to improve skin elasticity, firmness, and radiance.
- Inflammation Reduction: Counteracts chronic inflammation, a key driver of aging and age-related diseases.
- Energy Enhancement: Improves mitochondrial function, increasing cellular energy and reducing fatigue.
- Immune System Support: Strengthens the immune response, helping combat age-related immune decline.

### Key Anti-Aging Applications

- Skin Rejuvenation: Reduces wrinkles and restores youthful radiance.
- Joint & Cartilage Repair: Relieves discomfort and restores mobility.
- Organ Regeneration: Promotes repair and regeneration of vital organs.
- Hair Growth: Stimulates thicker, healthier hair growth.
- Cognitive Function: Enhances brain health and reduces neurodegenerative risks.

## Non-Expanded vs. Expanded Placental Stem Cells

### Why Non-Expanded Stem Cells Are Superior for Anti-Aging

Non-expanded stem cells are processed directly from placental tissue without laboratory culturing, preserving their natural potency and minimizing risks.

### Advantages of Non-Expanded Stem Cells

**Preserved Potency:** Retains original regenerative potential, avoiding the risks of cellular aging during lab expansion.

**Lower Risk of Mutations:** Non-expanded cells are free from the genetic alterations that can occur during expansion, reducing tumorigenicity risks.

**Faster Treatment:** Non-expanded cells are ready for immediate use, unlike expanded cells which require weeks of culturing.

**Enhanced Immunomodulation:** Exhibit strong natural immunomodulatory effects, reducing inflammation and rejection risks.

**Cost-Effective:** Simplified processing makes non-expanded stem cells more affordable and accessible.

### Making the Right Choice

Non-expanded placental stem cells offer a safe, ethical, and effective approach for regenerative medicine and anti-aging therapies.

### Transform Aging Into Vitality

Experience the future of anti-aging with non-expanded allogeneic placental stem cells. Restore your vitality and live life to the fullest.
